SUMMARY

AI Automation Engineer with 1 year of focused, hands-on experience building production-grade workflow automations and AI agent systems. Specialized in n8n orchestration, LLM-powered agents (OpenAI/Groq), and backend architecture with Node.js and Supabase/PostgreSQL. Built and deployed a fully automated AI Real Estate CRM system, currently live in production for a real client — handling lead capture, AI-based scoring, and automated follow-ups end-to-end. Self-taught, detail-oriented, and focused on shipping stable, working systems rather than demos.

FEATURED PROJECT

AI Real Estate CRM Automation — Maikos Real Estate

LIVE IN PRODUCTION

Built a fully hands-off lead qualification and follow-up pipeline for a real estate client, replacing manual screening of inbound leads.

- Designed a Supabase Leads table with deduplication logic and status tracking (new → contacted → info_complete → cold)
- Built a custom n8n agent system that scores lead intent (HOT / WARM / COLD) using GPT-4 based on budget, location, timeline, and property type
- Developed an AI email agent ("Andy") using Gmail API and threadId-based session memory for context-aware, personalized replies
- Automated missing-info requests and scheduled follow-ups, removing manual data entry entirely

Stack: n8n · OpenAI GPT-4 · Supabase · Gmail API · Node.js

OTHER WORK

Automated Invoice Processing Pipeline

CONCEPT BUILD

Workflow that parses incoming PDF invoices via OCR, extracts key metadata, validates totals, and logs payments directly into accounting tools.

Stack: n8n · OpenAI Document AI · Stripe API · Google Drive

AI Support Agent for E-Commerce

CONCEPT BUILD

Autonomous support agent connected to helpdesk channels that checks order state in PostgreSQL, drafts custom resolutions, and handles return workflows.

Stack: Node.js · LangChain · OpenAI Assistant · Shopify API

TECHNICAL SKILLS

Automation Tools

n8n
Webhooks
Google Sheets / Gmail API
REST APIs

AI / LLM Integration

OpenAI API
Groq API
Claude AI
LangChain
Prompt Engineering

Backend & Data

Node.js / TypeScript
PostgreSQL / Supabase
REST API Development
Data Pipelines

EDUCATION

12th Grade (Higher Secondary)

Completed

SELF-DIRECTED LEARNING

- 1 year of focused study in AI automation & backend engineering
- Structured roadmap: no-code automation foundations → AI agent development → production deployment
- Hands-on debugging: API integrations, database design, async workflows
